Wordpress Basics:

Pages:

Pages within wordpress do not relate to the blog structure of the site. You can make stand alone pages to quickly build a web site. About Us, would be a perfect example of when to make a wordpress page. Pages, like blog posts, can be directly linked to menus.

Wordpress Basics:

Menus:

Menus can be made via Appearance/Menus. You will need to create a menu first and then link each menu item to a page, post, custom link, category or picture tag.

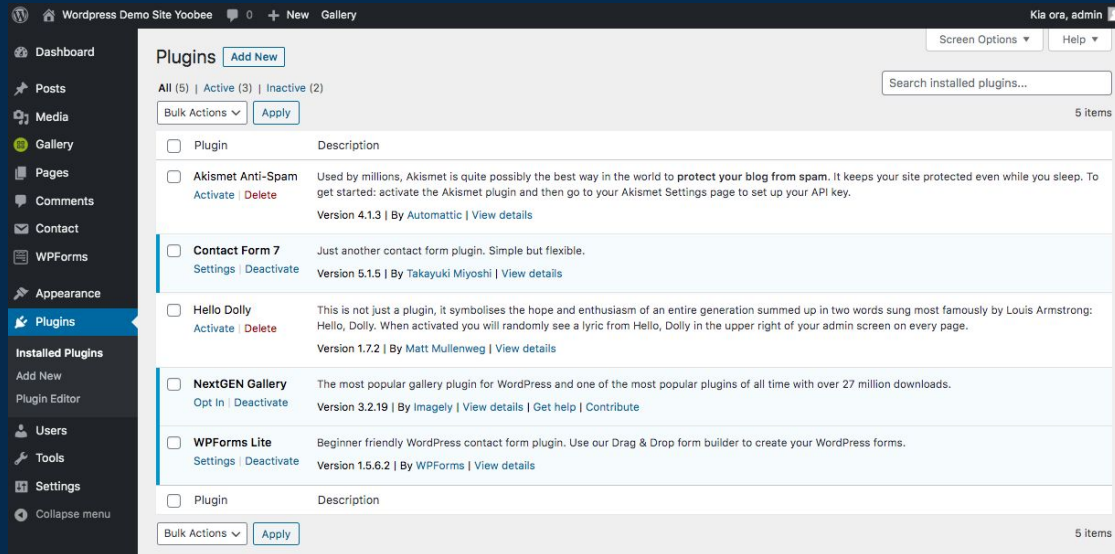

The screenshot shows the WordPress 'Menus' screen. On the left is a sidebar with navigation links: Dashboard, Posts, Media, Gallery, Pages, Comments, Contact, WPForms, Appearance (highlighted), Themes, Customise, Widgets, Menu Editor, Plugins, Users, Tools, and Settings. The main content area is titled 'Menus' and includes a 'Manage with Live Preview' button. Below this are 'Edit Menu' and 'Manage Locations' tabs. A text box prompts the user to 'Edit your menu below, or [create a new menu](#). Don't forget to save your changes!'. The interface is split into two columns: 'Add menu items' and 'Menu structure'. The 'Add menu items' column has a 'Pages' section with checkboxes for 'Contact Us' and 'About Us', and a 'Select All' button. Below this are expandable sections for 'Posts', 'Custom Links', 'Categories', and 'Picture tag'. The 'Menu structure' column shows the 'Main Menu' being edited. It contains a list of items: 'Blog 2019' (Category), 'Wednesday Late Post' (sub item, Post), 'My trip to Abel Tasman' (Post), 'About Us' (Page), and 'Contact Us' (Page). Each item has a dropdown arrow on its right for configuration. A 'Save Menu' button is at the top right of the structure area.

Wordpress Basics: Plugins:

Plugins are an ecosystem of software that can be used within your wordpress website. You can install shopping carts, galleries, contact forms and video players. Remember to research plugins via google before installing.

The screenshot shows the WordPress admin interface for a demo site named 'Yoobee'. The left sidebar contains a menu with options: Dashboard, Posts, Media, Gallery, Pages, Comments, Contact, WPForms, Appearance, and Plugins (which is highlighted). Below the 'Plugins' menu item, there are sub-options: 'Add New', 'Installed Plugins', 'Plugin Editor', 'Users', 'Tools', and 'Settings'. The main content area is titled 'Plugins' and shows a list of installed plugins. At the top right of this section are links for 'Screen Options' and 'Help', and a search bar labeled 'Search installed plugins...'. Below the search bar, there are tabs for 'All (5)', 'Active (3)', and 'Inactive (2)', with 'Active' being selected. A 'Bulk Actions' dropdown and an 'Apply' button are also present. The list of plugins includes:

<input type="checkbox"/>	Plugin	Description
<input type="checkbox"/>	Akismet Anti-Spam	Used by millions, Akismet is quite possibly the best way in the world to protect your blog from spam. It keeps your site protected even while you sleep.
